Here is the info for the product page: The product page says that it is for Simatic Step 7 V5.5. The website links to a google site for product information: And the downloads section says that there are downloads for the two Windows versions that are supported: 32 bit and 64 bit. The download is named Simatic S7-PLCSIM V5.5 SP4 Update 1. The current version is: SIMATIC S7-PLCSIM V5.5 SP4 Update 1. My questions: What is the difference between SP4 and SP5? My experience is that the older the version, the better the product. But in this case, there is an update. What does this mean? Why is the download named Update 1? And how can I get the download? A: S7-PLCSIM V5.5 is the newest version. S7-PLCSIM V5.5 SP4 is the newest version as of when you wrote the question. Update 1 is the newest version of that version. S7-PLCSIM v5.5 SP4 is the latest version at this moment. If you would be able to get the full version of S7-PLCSIM V5.5 (which is much more expensive), you will be able to update to the new version S7-PLCSIM V5.5 SP4 with the Update 1 Case: 17-60690 Document: 00514720507 Page: 1 Date Filed: 11/09/2018 IN THE UNITED STATES COURT OF APPEALS FOR THE FIFTH CIRCUIT 2d92cc491b
