An electrical company operating in southern New Mexico called to report an outage at a gas station. On August 23, Mesa Municipal Electric (MME) reported that a customer of theirs had called to report a power outage on the northern edge of the Route 3A intersection with McKinley Street, just west of Cana Street. MME reported that the power outage was likely caused by someone tearing down power lines on the far side of the road. MME crews were dispatched to check out the area to try and find the source of the power outage. When they arrived at the gas station, they found that it was dark inside, but working, and that the power was out for both the gas station and the convenience store. MME crew members checked with the gas station owner and found that the power outage had been the result of a car that hit a utility pole near the gas station. MME reported that the owner of the gas station told them that the power outage had occurred at 3:30 p.m. At 4:30 p.m., MME was notified that power was restored. MME crews will continue to follow up with the gas station owner and make sure that the power is working properly. MME crews operate a district system which supplies power to over 2,800 customers in Mesa, Bloomfield, Barelmas, Davis, La Union, Sahuarita, and San Luis. Power outages can be reported to MME by calling 1-866-846-8809. MME is also available at 1-866-846-8809.

Q: How to create a custom SortBy in linq to sql I'm using Linq to SQL in my C# application and I'd like to have a SortBy method that I could pass in any predicate and it would apply the predicate to the results before sorting them. Any ideas? A: You can use OrderBy() with a 2d92ce491b
