Canon Printer Lbp 6018 Driver

DEPUMP This software prevents a misprint when printing more than one page at a time in the same paper tray. This can lead to unintended printing of the same page again and again, which is called replicating. The de-pumping feature will reset the page counter in the software. To prevent a misprint or a false replication, set a manual page count in the software (F5), if you do not want the software to count pages automatically. v i d e b y 8 ? 5 C a l u t h r m n w 1 6 s 4 7 . 3 0 2
