The title compound, [Mg(C₅H₅N(2))(3)](H₂O).H₂O, contains one crystallographically independent Mg(2+) cation and three independent tris(2-pyridylmethyl)amine (TPA) ligands. The Mg(2+) cation, octahedrally coordinated, has an average distance of 3.235(4) Å from the three nitrogen atoms of TPA. The Mg(2+) cation lies on an inversion centre, the water molecule occupies a site on the inversion centre, and the OH group of the water molecule points toward a neighbouring inversion-related O atom. Each TPA molecule lies on a twofold axis of the tetragonal unit cell and has a conformation which is very similar to the imine derivative of TPA. Trump administration nominee Neil Gorsuch, a federal appeals court judge, has spoken out about gay marriage and abortion rights. And, on the Supreme Court, he is on record opposing gay marriage and admitting he has difficulty with Roe v. Wade, the 1973 decision that legalized abortion nationwide. On gay rights, Gorsuch has sided with conservatives, ruling in one case that discrimination on the basis of sexual orientation is unconstitutional. In another case, he ruled for a Colorado baker who refused to make a wedding cake for a gay couple.
