AutoCAD Timeline AutoCAD was originally named AutoPLANE. A source code release in 1985 revealed the program's initial working title was "Projectile." That name had the working title of the company's architectural and engineering department, headed by David Stout and John Call. The name was later changed to AutoPLANE, because the developers felt that the name didn't describe what the program actually did. Autodesk eventually decided that AutoPLANE would be a more familiar name for the application. An earlier release name was CAD/PLANE, which was then abbreviated to CAD. The current company name, Autodesk, was introduced in the mid-1990s. In 1997, the AutoCAD product line was split into the AutoCAD R14 and AutoCAD LT lines. AutoCAD LT was designed for home and small office use. The AutoCAD LT program has since been superseded by AutoCAD Architecture as the product of choice for the architects in most cases. The addition of parametric modeling has resulted in an increased number of applications for the product, both in terms of architectural and engineering applications. History Origin AutoCAD, as well as other CAD products, grew out of the development of CAD/PLANE, which was designed to automate drafting of architectural and engineering designs. The product was first released in 1977 as a stand-alone desktop graphics program for the Apple II microcomputer. The program was soon ported to other microcomputers. The creation of CAD/PLANE was the result of a company competition between IBM and Autodesk. The IBM program was named PLANE, which was an IBM-developed program for drawing

architecture and engineering plans and sections. In 1981, Autodesk attempted to get the Apple and IBM software companies to work together to create a combined program that would have both companies' names on it. The names PLANE and PLANE were later dropped in favor of the new product name CAD. CAD/PLANE for Apple II was the first commercial CAD program to feature full parametric modeling, which allowed the user to create a graphical representation of three-dimensional objects, which could be scaled and rotated. Development of CAD/PLANE started in 1980 at Autodesk headquarters in San Rafael, California. The first CAD/PLANE release for the Apple II was made available in November of that year. A key figure in the creation of CAD/PLANE was John Call, who

What's New In AutoCAD?

Extend pen pressure to navigate within a drawing. Attach a pressure-sensing pen to your tablet or other mobile device and use its sensitivity as a surrogate for pen pressure, such as when drawing splines and freehand lines. Improve the design process by viewing and annotating your drawings together with team members on a shared, interactive display. Browse and annotate a shared drawing together as your team. You can even share separate sessions on different displays. Analyze, improve and streamline the design process with new collaborative features. Share designs, review them and run “live” evaluations against numerous project criteria. With Zoom: Effortlessly zoom in and out of your drawings, while preserving the original resolution and aspect ratio. Design models using direct link to desktop, web or cloud-based version control systems. Simplify your view and edit commands. With tool-independent commands like lock, copy and paste, replace old commands with new behaviors. Create drawings, models and drawings quickly with a new, dedicated software app. Create any number of views, including single- and multi-object views. Focus on your work with document-specific editing tools. Maximize and unmaximize your drawing area, and protect or unprotect drawings. Easily create, share and annotate 2D and 3D images in a browser on any platform. Create and design directly on screen or print from the new Airspace Desktop 2D product. Share drawings with models and other document types, just like desktop or cloud-based services. (video: 2:00 min.) New Collaboration Features: Share your drawings with others who can provide feedback or take over as author. Share your annotations, objects, blocks and sketches with others, such as teams, clients or customers. Share and annotate

drawings together with team members on a shared, interactive display. Analyze, improve and streamline your design process together with your team. View and annotate your drawings with other team members while you're collaborating. Share your designs with many others, including those on a website, in a browser or desktop application or with team members in a video call. Design and share directly from your browser. On any platform. Share models, 2D images
