the Rosetta Stone blog. In-situ
manufacturing of atomically
thin rGO/PEDOT:PSS hybrid:
a new strategy for organic
electronic devices. The
fabrication of graphitic carbon
nitride based functional

inorganic/organic hybrid materials is a challenging yet promising task. Taking the fully organic nature of graphitic carbon nitride, we explore the potential of self-assembly of partially/fully fluorinated graphitic carbon nitride (PFCN/F-g-C₃N₄) with poly(3,4-ethylenedioxythiophene) PEDOT:PSS at the atomic level. As a result, in-situ ultrathin top-gate solution processed F-g-C₃N₄/PEDOT:PSS hybrid thin film devices show high performance, including the outstanding field-effect mobility, good gate on-off ratio, and high on-off current ratios. They represent the first

report on the successful fabrication of inorganic/organic hybrid structures for low temperature organic thin-film transistor applications. These results indicate that this simple, direct self-assembly technique of PFCN/PEDOT:PSS hybrid materials is a promising strategy for the fabrication of highly advanced organic electronic devices.

A personalized survey tool. Fill in your information to receive a personal survey sent to your email. Share Recipes Our store is filled with creative and simple recipes that you can make with whatever ingredients you can find.

Share Recipes with your Friends Whenever you share a recipe with one of your friends or family members, we'll use your email and a unique URL to create a personalized URL to connect them with you. They can easily share it with their friends on social media, such as Pinterest.

Heparan sulfate in the nervous system: an in-depth review. Heparan sulfate (HS) is an important glycosaminoglycan that is not only structurally ubiquitous, but is also significantly implicated in multiple roles in nervous system development and function. This review is a comprehensive summary of

knowledge derived from the study of HS molecules 3e33713323
