The secret to that is you need to get your data from the file system onto your own system and process it on your own, so you don't risk deleting it or have it accidentally being sent. I was thinking of a good way of doing this last week, and still haven't quite figured it out. I was thinking of basically putting an encrypted zip file inside another encrypted zip file and downloading it from some sort of website, but I'm not sure how much that would protect the data I was getting there, because people would be able to still get hold of the first zip file and then just get the other one with its password. ~~~ pjc50 Secret storage of the data in a file system, I think? That way you've absolutely no other means of getting to it, you have to crack the whole encryption on your 1d6a3396d6

I was able to convert.jpg to text and it works fine but when I use.BMP files it gets weird. This is the code: public string ConvertBmpToText(string imageName) { Bitmap image; TextReader text; string path; path = ConfigurationManager.AppSettings["OutputPath"]; image = Image.FromFile(imageName); text = new StreamReader(image, Encoding.UTF8); return text.ReadToEnd(); } This works fine for.JPGs but when I try to use.BMP files I get weird results. I made a test program like this: using (Bitmap bitmap = new Bitmap(@"C:\Users\Vestraj\Desktop\Superstar.bmp")) { string text = ConvertBmpToText(@"C:\Users\Vestraj\Desktop\Superstar.bmp"); Console.WriteLine(text); } This outputs this: [ s Br \0 K F\* p> b t K h \0 v K b = e } 6 { s p b
